

30 minute differentiated respiratory system review

More than 3

**Center 1**

**PART 1:** Using the vocabulary sheet provided, create a cluster map. Rules: Everyone start with the word: respiratory system. Center and circle it in the middle of your paper. Using the vocab sheet, think of words that connect and circle, continuing to look and find relationships.

**PART 2:** When complete, teacher will check for accuracy. Using the computer station, complete the DE Respiratory Assignment.

1. Click on Explore, explain, and elaborate tabs to preview the various video segments and read the articles.
2. Click on evaluate tab to complete the **S- assessment**

## Center 2

No Cool Camel- After reading the article Hazardous to your Health you may....

Option 1- Create a blog to the cigarette company criticizing how their products specifically damages the respiratory system (be sure to include information regarding specific parts damaged due to smoking), and why they should not target minors.

Option 2- Create a blog inferring how water vapor cigarettes 'do not' harm the respiratory system. (Be sure to include information regarding specific parts 'not-damaged' due to smoking.)

O-1

#### The Amazing Journey of Captain Oxygen

Option 1. Healthy Comics just hired you as a new comic strip writer and artist! Using information regarding the respiratory system (including all parts), you are going to write and illustrate (with color) a comic strip about Captain Oxygen. Captain Oxygen is a courageous and daring oxygen molecule traveling through the respiratory system. Your editors at Healthy Comics will be checking for accurate information and creativity... a clear description of how the respiratory system works and also helps the body maintain homeostasis.

Option 2. Imagine Captain Oxygen entered a body with asthma. After checking out information on the respiratory system, discuss how his journey might be affected, especially during an asthma flare-up.

Option 3. Captain Oxygen and his fellow oxygen molecules can't make their way to cells throughout the body without the help of other body systems. Discuss the other body systems that play a role in breathing and explain why they're important.
